# What do we know about Covid-19 and children?

Health Canada has just authorized the Pfizer vaccine for children ages 5 - 11. **We're concerned, and you should be too!** Here are some facts that you need to know to help you make an informed choice.

## 1. Children Are Not at Serious Risk From COVID-19.

Healthy children between 0 and 19 years are not at risk of serious symptoms or death from COVID-19. In fact, the flu is more dangerous to kids than COVID-19. Studies have shown that asymptomatic children are unlikely to transmit the virus to adults or pass it around at school. And even when children get sick, their symptoms are almost always very mild. We also know that natural immunity is better than any protection that vaccines can offer.

## 2. More Harm Than Good.

Pfizer's own data shows that their inoculations are doing more harm than good. Their 6-month trial results show that they are causing:

- 300% increase in adverse events
- 75% increase in *severe* adverse events
- 43% increase in deaths

We already know that the COVID-19 vaccines don't prevent you from catching or spreading the disease, but now we also know they are actually causing harm. 3, 4

### 3. Serious Heart Problems.

As of November 14, 2021, Public Health Ontario reported 537 incidents of myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining around the heart) following receipt of COVID-19 mRNA vaccines in Ontario alone. Across Canada that number is 1,241. The highest incidence has been in adolescents and young adults, and more often in males than females. Depending on the cause and extent of myocardial damage, historically the mortality rate is up to 20% at 1 year and 50% at 5 years. [5](#), [6](#), [7](#)

### 4. What do other countries see that Canada doesn't?

Finland, Sweden and Denmark no longer use Moderna in populations under 30 due to concerns about vaccines damaging the heart. Taiwan has also stopped using the Pfizer vaccine in children between 12 and 17 because of the risk of adverse reactions. **Don't Canadian kids deserve the same protections?** If we don't stand up for our children's health and safety, who will? Clearly not the Canadian government! Say "no" to a vaccine that children don't need to stay safe and healthy. [8](#), [9](#)
